C. M. RECOMMENDATIONS:

- A-B. Adopt the attached ordinances to approve the subject site plan amendment requests to install antennas and related equipment on existing telecommunications facilities, subject to the proposed conditions of the staff report.
- C-O. Approve the use permit requests to install antennas and related equipment on existing telecommunications facilities, subject to the proposed conditions of the staff report.

ISSUES: These are site plan amendment and use permit requests for antennas and related equipment on existing telecommunications facilities. The proposed and existing facilities are located on existing structures and preclude the applicant's need to erect new monopoles in the County. No issues have been identified.

SUMMARY: AT&T is requesting to install antennas and related equipment on fifteen (15) existing telecommunications facilities throughout Arlington County. These telecommunications facilities are located on various buildings and monopoles. All of these sites contain antennas that were previously approved administratively by the County, which now need to go through the County's special exception process. The installation of these new antenna structures and related equipment is meant to offer faster data transfer speeds to cellular phone users than the current generation of technologies and provide for more efficient customer service. The proposed antenna and equipment additions will not create an adverse visual impact on the various locations within the County. The proposal is consistent with the *Interim Guidelines for Telecommunications Facilities on County-Owned Property* (Telecommunications Guidelines), which also applies to private properties and encourages the placement of antennas on existing structures. These facilities will be unmanned and only require infrequent visits by maintenance personnel. Therefore, staff recommends the following: (1) The County Board adopt the attached ordinance to approve the subject site plan amendment requests (A-B) to install antennas and related equipment on existing telecommunications facilities, subject to the proposed conditions of the staff report, and (2) The County Board approve the use permit requests (C-O) to install antennas and related equipment on existing telecommunications facilities, subject to the proposed conditions of the staff report.

The following sections of the report address each site. The following statement is applicable to all cases presented in this report:

The Interim Guidelines for Placement of Telecommunications Facilities on County-Owned Property (Telecommunications Guidelines) were used to evaluate the application. The *Telecommunication Guidelines* offer direction in the way of design, visual impact, and compliance with Federal Communications Commission (FCC) regulations, among other things. The *Telecommunication Guidelines* can be applied to telecommunication facilities on privately-owned as well as County-owned property. The *Telecommunications Guidelines* encourage the location of new antennas on existing structures, as opposed to constructing a new pole. The proposed antennas meet these criteria. Attached are plans depicting the location and general appearance of the proposed antennas.

Neighborhood: The site is located within the Lyon Village Citizens’ Association, and the citizens’ association was contacted about this request. The citizens’ association expressed no issues with the use permit request.

DISCUSSION: AT&T is proposing to install a total of three (3) panel antennas on existing mounts located on the monopole next to I-66 and Lee Highway at Exit 72. Additionally, one (1) equipment frame will be installed within the adjacent equipment room. The proposed antennas will not create an adverse visual impact on the surrounding area. The facility will be unmanned and only requires infrequent visits by maintenance personnel. Furthermore, the proposed antennas and support structures will match the appearance of the existing antennas on the monopole.

CONCLUSION: The proposed site plan amendment and use permit requests are compliant with the County's *Telecommunications Guidelines*. The proposed antenna and equipment additions will not create an adverse visual impact on the various locations within the County. Therefore, staff recommends the following: (1) The County Board adopt the attached ordinance to approve the subject site plan amendment requests (A-B) to install antennas and related equipment on existing telecommunications facilities, subject to the proposed conditions of the staff report, and (2) The County Board approve the use permit requests (C-O) to install antennas and related equipment on existing telecommunications facilities, subject to the proposed conditions of the staff report.

Hi Marco,

Just to recap our earlier conversation: the Walker Chapel, at 4102 North Glebe Road, is a locally designated historic district, designated by the County Board in 1978. All exterior changes to the buildings or grounds require a Certificate of Appropriateness from the HALRB. However, looking at the proposed plans, the antennas will be placed in the steeple, behind the windows. There will be no exterior mounting hardware or any exterior modifications to the building. In that case, a CoA is not necessary. The permits for the antennas will require HP staff sign off. Please let me know if you or the applicants have any other questions.

Best,

Subject: U-3286-11-1 Use Permit Request

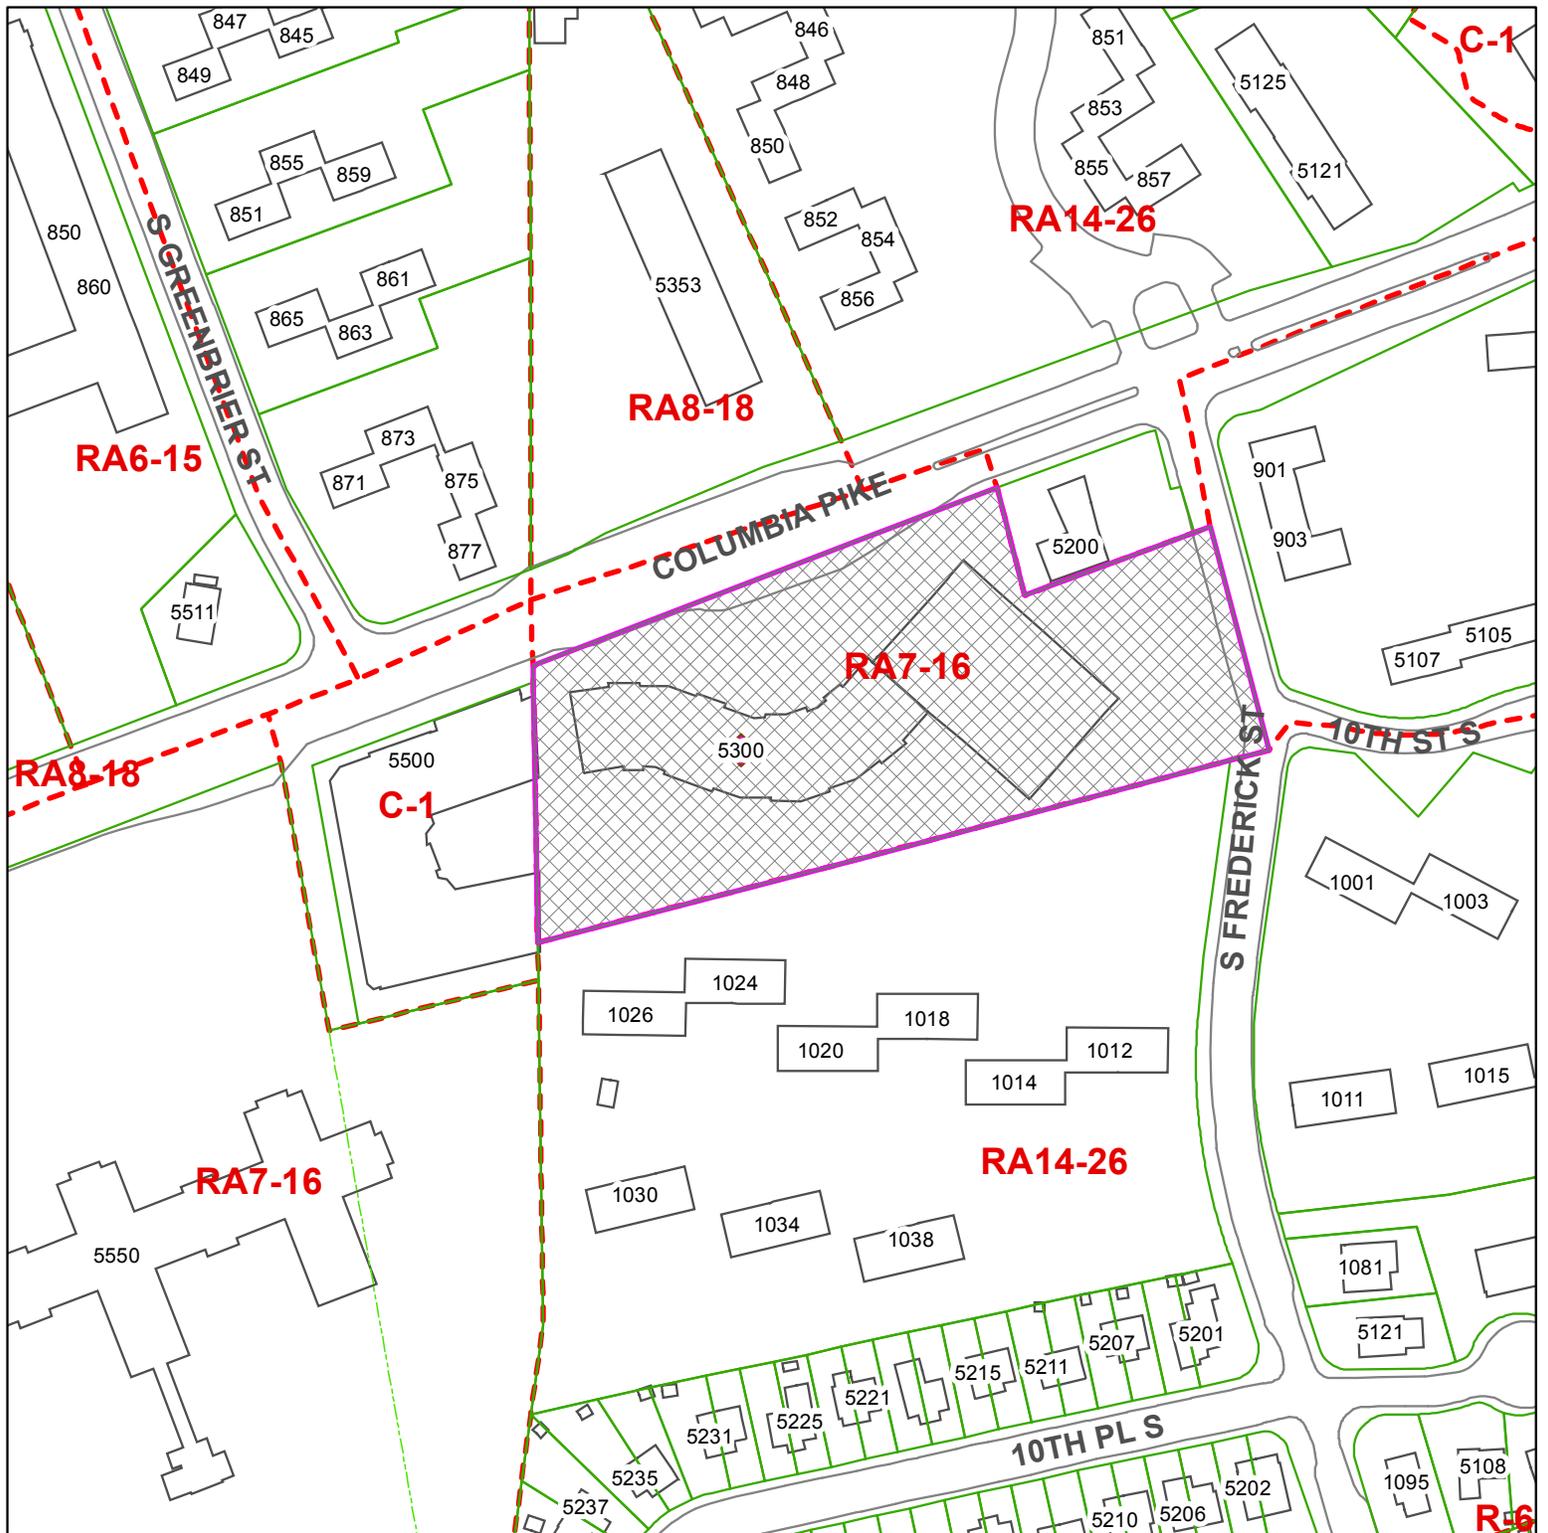

Hi Rebecca,

I was made aware by Tom that I should check with Neighborhood Services regarding this request. The applicant, AT&T, would like to install 3 new antennas on new mounts that will replace 3 existing antennas on the steeple of this church. The antennas are located behind the windows of the steeple structure. There are currently a total of 6 antennas on this location, so the only change will be the replacement of 3 existing antennas with 3 new ones. The plans show this in greater detail (pages 14-16 of the PDF attachment). Do you foresee any issues with this request? Thanks!

Marco
